Sync icloud calendar with office 365

Google Calendar has added support for the CalDAV standard, creating a world of synchronization... Read moreEr, this doesn't mean you sync Google Calendar with just one desktop calendar. It means that no matter what you use, for example, Outlook at work and iCal at home, you always stick to desktop calendars if that's what you prefer. Google Calendar now works as a great web application and a dedicated sync tool. It's the cloud, and once it's set up, you'll never have to access your calendar over the web again if you don't feel like it anymore. But if you're not on a desktop, fire GCal from any web browser, make changes, and still make sure your desktop is fully in sync the next time you fire it. Let's get started. Syncing Microsoft Outlook with Google Calendar Syncing calendar events between Outlook and Google Calendar has been a breeze since Google came out with Google Calendar Sync, a free application that offers two-way synchronization between the two. (It also supports one-way sync in both directions, if for some reason you don't want two-way synchronization.) Assuming you're using a supported installation (Outlook 2003 or 2007 and Vista or XP), check out how to get it to work here. G/O Media can get a commissionBlitzWolf 10 LED Ring KitDownload and install google calendar sync. Please enter your Google Account email address and password. Select your synchronization method (you probably want two-way synchronization) and the sync frequency you want. It defaults to sync every 120 minutes, which seems a bit long for most. Press Save and you're done. Easy, right? If you've added a new item to your calendar and you want to force a new sync instead of waiting for Google Calendar Sync to sync, right-click the system tray app and choose Sync. It doesn't get much easier than that. Sync iCal with Google CalendarUPDATE: Since this post was written, Google released a new tool called Calabration that handles iCal-to-Gcal sync setup with even greater ease. (Original post) Mac OS X only: Google announced CalDAV support in Google Calendar this summer, which meant that ... Read more Yesterday's Google Calendar supports two-way synchronization with iCal using the CalDAV standard for external calendars. Setting up iCal with GCal varies slightly based on whether or not to use your default GCal calendar or a secondary calendar. First, start setting your Google Calendar by default with iCal:Open iCal, and then start your iCal preferences (iCal -> Preferences or Cmd-.). Click the Accounts tab, and then click the + button to assign a new external calendar iCal.Call the calendar whatever you want (I went with Personal for my main calendar), then enter the Google Account username (which is normally your Gmail address) and password. Click Server Options to display the account's URL text box. For your default calendar, enter the following URL: gmail.com/user...replacing youremail@gmail.com with with actual email address. Once you've done that, just press Add and you're done. Give iCal a few minutes to download all your events and you're ready to go. To add a secondary calendar, the steps are exactly the same as above with one small difference. Instead of inserting your email address into the ACCOUNT URL as described in step 4, you should grab the calendar ID for that particular calendar. To find it, open GCal, click the arrow next to the calendar that you want to sync, and select calendar settings. In the settings, find the Calendar Address section at the bottom of the window, and then copy, and then paste the calendar ID (which is formatted as an email address) instead of youremail@gmail.com in the URL above. Refresh your iCal to make sure you've synced the latest and greatest at any time by selecting Calendar> Refresh, or clicking Cmd-R. (Original post) Sync Mozilla Sunbird or Thunderbird with Google CalendarFeel you use Mozilla's standalone calendar application Sunbird or Thunderbird with the Lightning extension installed (Lightning integrates Sunbird into Thunderbird), two-way calendar synchronization between application and Google Calendar is a whistle. The special sauce in this synchronization is the Provider for Google Calendar extension. Installing Provider in Sunbird or Thunderbird is basically the same procedure, and here's how it works: Download and install the Provider extension by saving it to your desktop, opening the Add-ons dialog box in Sunbird or Thunderbird, and dragging the file you just downloaded in the Add-ons dialogue. Once installed, you'll need to restart the application. Now that provider is installed, you'll need to add your new Google Calendar. In Sunbird, go to File -> New Calendar; In Thunderbird, the File is -> New ->calendar when you're in calendar view. You are now looking at the Create New Calendar Wizard. Select On the Network and then press Continue.Choose Google Calendar as a calendar type. The Location field requires the XML flavor of your calendar's private address, which you get by opening GCal and choosing calendar settings from the drop-down list next to the calendar you want to open. At the bottom of the settings page, you can see the Private Address section. Copy the XML link and paste it into the Location field in Sunbird or T-bird.When you click Continue, you'll be asked for your Google Calendar Username (again, your Gmail address) and password. Enter it, name your new calendar, and press Continue. You're done. From now on, every event you add to that calendar will automatically sync with GCal and vice versa. You reload the calendar at any time to get the most up-to-date information by clicking the Reload button on the toolbar. (The button is by default on the toolbar in Thunderbird, but you may need to adjust your Sunbird calendar to add it to the toolbar.) Sync your mobile device to Google Calendar To sync your mobile device to with Calendar, you also have a ton of great and free options. BlackBerry users can view Google Sync, a BlackBerry app created by Google specifically for syncing Gcal-to-BlackBerry. Alternatively, the free, open-source application GCalSync does bidirectional synchronization between Gcal and tons of supported phones. (Original post) Freeware program GcalSync offers two-way synchronization between Gcal and your mobile device... Read moreIf you're an iPhone or iPod touch user, set up automatic two-way sync between your Google Calendar (and Gmail contacts) with NuevaSync website. (Original post) We've shown you how to set up free push email, contacts and calendars on your iPhone, but for... Read moreFinally, if your phone supports SyncML, web application can handle GooSync Gcal synchronization without installing anything. Other optionsIf you're not happy with the methods described above, which I've selected because each represents the easiest and cheapest (read: free) option, there are still plenty of other tools to sync Google Calendar with your desktop calendar. First, we discussed how to sync Google Calendar and Gmail contacts with the more technical GCALDaemon. Also, the cross-platform Calgoo just went free, with both Outlook and iCal synchronization capabilities. On a somewhat independent but still useful note, you now also sync Google contacts with your Mac OS X address book. Mac OS X Leopard only: The release of Today's Mac OS 10.5.3 has added a juicy tinge to Address... Read more How do you like getting your GCal on your desktop? Let us know in the comments. Adam Pash is a senior editor for Lifehacker who isn't happy until everything syncs. His special feature Hack Attack appears every Tuesday on Lifehacker. Subscribe to the Hack Attack RSS feed to get new installments in your newsreader. Microsoft 365 (formerly Office 365) is the best option for people who want access to all Office apps and benefits across multiple devices. When you acquire this subscription, you share the subscription with up to six people. It's also the only offering that provides continuity of security and maintenance updates and upgrades at low cost of ownership. However, selecting this path, there are monthly or annual fees, and you may end up paying for features and perks that you don't need. \$70 with Microsoft Six user subscription Free upgrades All apps have access to customer support Windows 10, 8, 7, macOS support Monthly/annual payments Fulic changes Cost for unnecessary features Limited functionality as service issues If you only need the core apps on one computer. Office 2019 may have everything you need because it contains all the necessary tools (Word, PowerPoint and Outlook) to get the work done at school or work. The caveat is that pre-paying can be expensive, you have to pay again to upgrade and you don't get any additional features. \$150 at Microsoft One payment Core apps access Traditional Experience Security updates Windows 10 and macOS support A device license Limited features access no No No No support for other Windows releases If you're new to Microsoft Office or planning to upgrade, you'll see two options available that can be confusing, including Office 2019 and Microsoft 365's Office. While these offers give you access to the same set of apps, the difference comes down to the list of extras and cost of ownership. Microsoft 365 Source: Windows Central Microsoft 365 is the name of the paid service that replaces Office 365. Although it has a new marketing name, you'll still get the same apps available with Office 2019 and the same benefits. However, with the new branding, you'll also get more apps and features. Since this is a subscription service, you'll pay a monthly/annual fee to access the suite of apps such as Word, Excel, PowerPoint, Outlook, Publisher, Access, and others on all your devices, including PC, Mac, tablet, and phones. (As long as only six devices can access the account at any given time.) Depending on the subscription you choose, you also share the account with up to five additional people for a total of six people with one subscription. Perhaps one of the best parts of the service is that you never have to worry about upgrades. When you install the Office apps with Microsoft 365, you'll always install the latest version. This means that once they're installed on your computer, they'll be installed automatically with continuous security and maintenance updates, improvements, and newer versions. You'll also have access to cloud-based features (such as AI and real-time collaboration) to stay even more productive in school, office, and devices. As part of the service, everyone gets 1TB of OneDrive storage (up to 6TB in total with the Family subscription) and Skype minutes to call landlines. The subscription also gives you access to the Microsoft support line to fix any problem with the apps. If you have lots of photos and other files, in addition to the already 1TB of cloud storage, you can also buy up to 1TB of additional OneDrive storage on steps of 200GB for an additional \$1.99 per month, doubling the total storage capacity to 2TB (1TB already included in the plan and 1TB with the additional plan) for \$9.99 per month. The option is available to Microsoft 365 members Personal and Family. The only caveat is that only the primary account holder can purchase the individual terabytes if you have the Family plan. Who to buy Microsoft 365 If you need everything the suite has to offer, Microsoft 365 (Office 365) is the best option, as you can access all the apps you install on any device, including Windows 10, Windows 8.1, Windows 7, and macOS. Also, it is the only option that offers continuity of updates and upgrades at low cost. In Office 2019, on the other hand, you only install the apps on a single computer running Windows 10 and you'll have to pay again for upgrades. If you have access suite of apps, apps. 365 is perhaps the best choice. The cloud service comes in two different flavors. If you're the only person using the apps and cloud services, you'll get the Microsoft 365 Personal (formerly Office 365 Personal) subscription for \$70 a year, giving you access to all apps, in addition to 1TB of OneDrive storage and Skype minutes. To share the account with family members or friends, choose the Microsoft 365 Family subscription (formerly Office 365 Home). It costs \$100, you share the apps and benefits with up to six people and everyone gets 1TB of OneDrive storage and Skype minutes. Whichever subscription you choose, you'll have access to many additional services, including Microsoft Family Safety to manage screen time, app and game usage, share location, monitor driving behavior for young drivers, and more for family members. Other premium features include Microsoft Editor to check spelling, grammar, and writing style using AI help, similar to Grammar and other creative tools powered by AI, including PowerPoint Presenter Coach, Ideas, Cv Assistant, and Designer. And money in Excel to view, track, and organize your household finances. You'll also get access to creative content, such as stock photos, templates, icons, and fonts. Some apps and services bundled with Microsoft 365 are also available with a free Microsoft account, but they have limited features that can only be unlocked with a subscription. In addition, the plan unlocks the premium version of Outlook.com, including everything available with the free version, plus 50GB of storage, no ads, message encryption, and enhanced security. When choosing one of the available plans, you need to purchase the annual subscription plan to save money in the long run. If you're a student or teacher, Microsoft also has a free subscription, which allows you to participate with a valid school email address. With this subscription, you can use apps like Word, Excel, OneNote, PowerPoint, Microsoft Teams, and other school tools at no extra cost. Although Windows 7 is no longer supported, Microsoft will continue to provide security updates for the Office apps until January 2023. However, new features won't be available until you upgrade to Windows 10. Office 2019 Source: Windows Central Microsoft Office 2019 is the name for the standalone version of the popular series of apps that don't require a subscription. This means that you will own the copy forever after the one-time purchase. Using the standalone version (also called the perpetual or on-premises version of Office), you can install and update the apps on a single computer. However, you do not upgrade to a newer version. In other words, you continue to use the apps you've bought for their life cycle (usually five years) and (without updates). However, if you want to upgrade, you'll need to buy back a new license. While Office 2019 comes with all the essential (Word, Excel, PowerPoint, and Outlook) with more improvements than its predecessor, it only includes a subset of features. It also misses many of the benefits available with a Microsoft 365 subscription. For example, you won't find cloud and AI features, along with other services, such as 1TB OneDrive cloud storage, Outlook.com premium, and free monthly credits to call landlines over Skype. Who needs to buy Office 2019 The Office 2019 option is specifically available to commercial customers with volume licenses who need to switch to a cloud version of Office and have specific requirements to use the apps on-premise. However, the option is available to anyone who wants to buy this offer. While anyone can buy Office 2019, this version is designed for certain commercial customers. If you are a home user, this is a good option only if you prefer a more traditional approach and don't mind paying the upfront costs. It's also a solid choice if you plan to use the apps on one device, no additional features are needed or if you're not ready to start using a subscription. While you get a license for a single PC or Mac, the one-time purchase option also allows you to install the core apps on mobile devices, but with limited functionality. Office 2019 comes in two editions, including Office Home & Student 2019 and Office Home & Business 2019, and they're typically priced at \$150 and \$250 per device, respectively. Office Home & Student 2019 comes with Word, Excel, and PowerPoint, while Office Home & Business 2019 includes Word, Excel, PowerPoint, and Outlook. Unlike previous versions, Office 2019 is supported only on computers running Windows 10 or the three most recent macOS versions. If you need to install Office on Windows 8.1 or Windows 7, you'll need to use a Microsoft 365 subscription. So, which one should you buy? The final answer depends on how you will use the apps and services. But if you're still using Office for years, buying a Microsoft 365 subscription might be the best option, as you'll get full access to all apps and benefits with low cost of ownership. Take advantage of more and increase productivity with the latest improvements Microsoft 365 offers access to all Office apps and many other features, such as 1TB OneDrive, Skype minutes, and Outlook.com premium. You also install Word, Excel, PowerPoint, Outlook, and other desktop apps on up to six devices, and depending on the subscription, you share the subscription with up to six people. Pay once and use it forever Office 2019 includes all popular apps, such as Word, Excel, PowerPoint, and Outlook, with all the features you need to get the job done. We can earn a commission for purchases through our links. Learn more. More.
